Shared Facilities

A complete list of facilities shared by a SCANA Transmission Provider and a Marketing Affiliate and the security measures in place for such facilities are as follows:

1. SCANA's headquarters is located in Cayce, SC at 100 SCANA Parkway. Its electric Transmission Provider, South Carolina Electric & Gas (SCE&G), and gas Transmission Provider, Carolina Gas Transmission Corporation (CGT), are in the Transmission Operations Center at 601 Old Taylor Road, Cayce, SC 29033; approximately 5 miles from their Marketing Affiliates which are located at 1400 Lady Street, Columbia SC 29201. Employee's access these areas is restricted by card key access based on employee FERC classifications and job responsibilities.
2. Employees of both of SCANA's Transmission Providers have computer local area networks to which the Transmission Providers and the Marketing Affiliate groups have access. However, the Marketing Affiliate groups do not have password access to either of the Transmission Providers' drives and files.
3. All SCANA employees have access to a corporate-wide intranet. This intranet contains general information about the activities of SCANA Corporation and its subsidiaries such as newsletters, articles, phone directories, etc. The intranet also provides employees of SCE&G with a display showing generation unit output and aggregated net electric transmission tie interchanges for SCE&G's control area. SCE&G provides access through the corporate intranet to transmission/substation drawings; however, this access is password restricted and Marketing Affiliate employees do not have access.
4. Employees of the Marketing Affiliate and the Transmission Providers have access to the electric Energy Management System. However, Marketing Affiliate employees' access is limited to functionalities showing SCE&G's control area load levels, generation unit output, generation cost information and aggregated net transmission tie interchanges of SCE&G's control area. Security measures have been implemented to prevent Marketing Affiliate employees from viewing transmission related information.
5. Computer mainframe and telephone systems are shared by many SCANA employees. The computer equipment, including access to all data bases, is password protected in order to maintain segregation of use and confidential access to the system.
